

Sericulture Shed

A sericulture shed is a specialized facility dedicated to the complex process of sericulture, which involves the cultivation of silkworms for the production of raw silk. The shed serves as a home for silkworms from the third instar stage until the formation of cocoons. The sericulture unit maintains optimal conditions for silkworm rearing, which contributes to the production of high-quality raw silk.

Key Features:

- **Shed Dimensions:** 72 × 28 feet
- **Height:** 15 feet
- **5 Racks:** Purpose-built for feeding and handling silkworms
- **Unit Capacity:** Accommodating 200 Disease-Free Layings (DFLs)
